

BRUNO VASSARI LAB DIVISION

BOOSTERS TREATMENT

The majority of skins, irrespective of their age, frequently have different problems. The traditional treatments, while incorporating a variety of actives, have a very specific purpose and, sometimes, do not fulfil our needs when the skin has more affectations. Lab Division Boosters enable us to personalise treatments according to the problems and prepare the specific cocktail for each person and even for each session of treatment.

INDICATIONS OF THE TREATMENT:

Indicated for all types of skin, personalising the treatment with the use of the boosters and their dosage according to the specific problems.

FREQUENCY OF TREATMENT:

Undertake one session each week for 6 weeks.

STEP BY STEP

(Duration of treatment: 60 mins)

- 1 Start the treatment by removing the make-up gently from the eyes and lips impregnating some cotton wool with the two-phase **Bio-Douce** make-up remover.
- 2 Then cleanse the face, neck and neckline with the appropriate cleansing milk and toner, according to the skin type and problem.
- 3 Carry out the exfoliation of the skin applying a layer of **Papain Enzymatic Resurfacer** with a fan brush on face, neck and neckline. Let the product work for 10 minutes and remove it with dampened mitts.
During this time a feeling of freshness and stinging will be felt and will progressively intensify. If it irritates the skin, as an option, the product can be worked with the fingertips.
- 4 Then the process of personalised treatment begins.
- 5 Place a total of 60 drops (3 ml) of the appropriate boosters according to the skin's needs in a small bowl. **See table.**
- 6 In another bowl, place 10 ml of **Facial Massage Gel** to which is added, using the measuring syringe, 1 ml of the booster cocktail and mix vigorously.
- 7 Then apply the mixture on the skin in a fine layer and perform the massage.
- 8 Then remove the massage gel with a towel dampened in hot water.
- 9 From the mixture made with the boosters, take 1,5ml again and apply it to the skin as a concentrate, working it until it is all absorbed.
- 10 Then apply the **Second Skin** mask, presented in two pieces to adjust better to the face.
- 11 Unfold the face mask and remove one of the protective gauzes. Apply it to the face and remove the second protective gauze, modelling the mask like a second skin. Do the same process with the specific mask for the neck and leave to work for 20 mins.

- 12** After this time remove the masks leaving the remains of the active serum that it contains which we will make it penetrate with a brief massage.
- 13** Then apply the **Peptide Eye Contour Gel-Cream** on the eye contours and finish with **The True Cream**, to which has been previously added the remaining 0,5ml of the booster mixture.

Follow-up at home:

Cleansing	Enzyme Cleansing Powder	Cleansing powder with exfoliant enzymes. Cleanses and rejuvenates the skin. Contains Vitamin C with anti-ageing effect and lightens the skin. Application: morning and night.
Toner	Clarifying Milky Toner	Toner emulsion with Vitamin C that stimulates the synthesis of collagen and moisturises the skin. Application: morning and night.
Night treatment	Lab Division Boosters - Serum	Use the suitable serum according to the skin type. Apply after deep-cleansing the skin. Application: night.
Eye treatment	Peptide Eye Contour Gel-Cream	Eye contour in gel texture. Treats eye bags and stimulates the production of collagen. Apply a small amount on the external angle of the eye and spread it gently around all the contour. Application: morning and night.
Weekly treatment	Scrub & Mask	Exfoliant and mask in a single product. It eliminates dead cells, purifies and calms the skin. Apply a layer on the skin and massage the product, dampening the fingertips now and then. Leave exposed for a few minutes and remove with abundant water. Application: 1 or 2 times a week according to the skin's needs.
