

VITIS TREATMENT

Cellulite with water retention

A common problem associated with cellulite is water retention. Seaweed has a high iodine and mineral content, which, combined with grape polyphenols, give the treatment a draining and anti-oxidant effect.

USE OF TREATMENT:

Specific cellulite treatment associated with fluid retention and for fluid retention caused by circulatory problems.

FREQUENCY OF TREATMENT:

2 sessions per week.

STEP BY STEP

(Length of treatment: 75 minutes)

- 1 Carry out an in-depth exfoliation of all the body by mixing a measure (spoon inside the container) of **Il Sale e l'Uva** with 20 ml of **Olio di Vinaccioli**. Work using gentle movements and wash off with abundant water or a shower.
- 2 Proceed to the massage with **Uvaslim** on the areas to be treated.
- 3 After the massage, apply **Vigna de Mar** gel in a thin layer all over the body. Wrap the client in osmotic film and cover thermal blanket to enhance the slimming effect of the product. Leave it on for 20 minutes.
- 4 After the exposure time remove the gel using a towelling wash mitt and abundant warm water. The client does not need to shower.
- 5 To complete the treatment apply **Uvaslim** massage cream. The cream is enriched with grape polyphenols, which have an important antioxidant and anti-cellulite effect from cellutrat (iodine-derived).

BRUNOVASSARI

Follow-up at home:

Weekly treatment

Double Body Peel

Double exfoliating action: fossil granules and glycolic acid that eliminate the dead cells leaving the skin silky, smooth and uniform.

Perform the peeling twice a week. Apply the product onto the dry skin and massage gently. Then rinse with water.

Daily treatment

Slim Effect Gel

Body gel that favours loss of volume and firms the tissues. The icy freshness, which its active agents provide, stimulates the cellular metabolism which helps to burn the fats stored.

Apply every day, massaging the area to be treated with rising circular movements.
